PORTFOLIO'S FOUR FUNDAMENTAL PRINCIPLES

GLOBAL ALLOCATION

Global diversification across asset classes seeks to reduce portfolio risk and volatility by limiting exposure to individual risk factors

FUNDAMENTAL ANALYSIS

Forward-looking risk assessment through fundamental analysis seeks to anticipate market events and trends rather than reacting to them

TACTICAL MANAGEMENT

The Fund seeks to adapt to evolving risks and opportunities, rather than switching quickly between assets

RISK MANAGEMENT

All Donoghue Forlines portfolios have the ability to raise cash or short-term Treasuries to help reduce the risk during volatile market downturns

KEYS TO OUR APPROACH

The Donoghue Forlines Tactical Allocation Fund (The Fund) is designed to be a core, long-term investment, presenting moderate growth potential and risk management across several asset classes. This strategy seeks to provide long-term capital appreciation.

- Donoghue Forlines believes that diversifying assets globally while actively managing exposure to all three major asset classes: equities, fixed income, and alternatives is critical to both short- and long-term investment success for global strategies.
- The strategy is unconstrained and treats cash as a tactical asset class and has the ability to raise cash levels as high as 100% as a defensive measure against volatile market downturns.
- The Fund invests based on a long-term secular view with tactical positioning during the shorter-term business and credit cycles.
- The Fund does not short or use levered ETFs

PORTFOLIO'S FOUR FUNDAMENTAL PRINCIPLES

LONG TERM SECULAR VIEW
OF GLOBAL TRENDS AND
OPPORTUNITIES MULTI-
YEAR HORIZON

WE FOCUS ON CREDIT,
VALUE AND MACRO
ANALYSIS 6-24 MONTHS

WE REVIEW RISK,
POSITIONS, AND
OPPORTUNITIES MONTHLY

- We base decisions on fundamental credit driven research that supports our long-term secular views and investment themes.
- We believe credit is the best indicator for the direction of interest rates, which in turn drives asset prices.
- We seek to identify long-term global trends and invest in asset classes we feel will appreciate as these trends unfold. We invest in other positions over shorter cycles when conditions are favorable.
- We choose underlying funds that best express these views, focusing on the underlying holdings and exposure of each fund and its liquidity.

Donoghue Forlines LLC is a tactical investment firm that has specialized in risk managed portfolios since 1986.

The portfolios team’s monthly meetings drive strategy and tactics and have inputs from Senior Advisors, proprietary contract research and portfolio consultants. Donoghue Forlines utilizes an internal financial conditions analysis that is geared specifically towards the global tactical allocation investment style of the portfolios.

The MSCI ACWI index measures the performance of the value large and mid-cap segments of the particular regions, excluding USA equity securities, including developed and emerging market. It is free float adjusted market-capitalization weighted.

Investors cannot directly invest in an index and unmanaged index returns do not reflect any fees, expenses or sales charges.

Important Risk Information

The asset allocations are presented to illustrate examples of the asset allocations that the fund can allocate to and the diversity of areas in which the funds may invest, and may not be representative of the fund’s current or future investments. Asset allocations are subject to change and should not be considered investment advice.

The MSCI ACWI Index is a free float adjusted market capitalization weighted index that is designed to measure the equity market performance of developed and emerging markets.

The Dow Jones Moderately Conservative Index is a member of the Dow Jones Relative Risk Index Series and is designed to measure a total portfolio of stocks,bonds, and cash, allocated to represent an investor’s desired risk profile.

As with all mutual funds, there is the risk that you could lose money through your investment in the Fund. The net asset value of the Fund will fluctuate based on changes in the value of the equity securities in which it invests. Hedging strategies may not perform as anticipated by the adviser and the Fund could suffer losses by hedging with underlying money market funds if stock prices do not decline. If money market funds are utilized, such Underlying Funds are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. As a result, your cost of investing in the Fund will be higher than the cost of investing directly in Underlying Funds and may be higher than other mutual funds that do not invest in Underlying Funds.

Underlying funds and ETFs are subject to investment advisory fees and other expenses, which will be indirectly paid by the Fund. As a result, your cost of investing in the Fund will be higher than the cost of investing directly in other mutual funds and ETFs and may be higher than other mutual funds that invest directly in fixed income securities and equities. When the Fund invests in fixed income securities, the value of the Fund will fluctuate with changes in interest rates. Defaults by fixed income issuers in which the Fund invests will also harm performance. Investing in the commodities markets may subject the Fund to greater volatility than investments in traditional securities.

The Fund’s primary benchmark has been changed to the MSCI AC World Index because it is a more appropriate index given the Fund’s strategy and portfolio holdings.
